

Girls' reproductive health and hygiene!

The AI Medical Outpatient Clinic plays an important role in preventing the sexual and reproductive health of students and staff.

Physicians and health care providers at the outpatient clinic provide students with information on sexual health care, contraceptive methods, and prevention of sexually transmitted diseases. These services help students make educated decisions and act responsibly.

The AI Physician Outpatient Clinic also provides individual counseling services to students while maintaining confidentiality. These services allow them to talk openly about sexual and reproductive health and answer students' questions.

The AI staff outpatient clinic conducts various workshops and trainings to equip students with the necessary knowledge and skills during their studies, which contributes to the preservation of their health. In this way, Akhmet Yassawi University Outpatient Clinic increases access to sexual and reproductive health services by training students to lead healthier and more responsible lives.
